## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-56 and 59, drawn to a composition for a keratinous material comprising at least one film-forming polymer and at least one thermal transition agent and a method of using said composition, classified in class 424, subclass 64.
  - II. Claims 57 and 58, drawn to a process for removing make-up from a made-up keratinous material, classified in class 510, subclass 136.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the composition of Group I can be removed by a method other than that claimed in claims of Group II, e.g. by applying a make-up remover or using a make-up removing cloth.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Election of species should be required prior to a search on the merits in all applications containing both species claims and generic or Markush claims.(MPEP 808.01(a))

6. Claims 1 and 54-58 are generic to a plurality of disclosed patentably distinct species comprising:

(a) film forming polymers encompassed by Claims 24 and 25; and

(b) thermal transition agents encompassed by Claims 11, 15 and 19

which require a burdensome classification, and/or bibliographic, manual and computer search.

Accordingly, regardless of which group is elected, the Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, i.e. a single class of compounds, from both components (a) and (b) to form a composition, even though this requirement is traversed. Applicant should include a chemical structure of the elected compounds if not already contained in the specification.

To be complete, a response to the election of species requirement should include a proper election along with a listing of all claims readable thereon, including any claims subsequently added. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Art Unit: 1616

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
